

EMBEDDED SPLIT FACE THIN BLOCK

CONCRETE WALL PRODUCERS ARE NOW ABLE TO ACHIEVE A SPLIT-FACE BLOCK FAÇADE USING THIN-BLOCKS. The unique application expands the competitive possibilities firms face in today's tilt wall and precast wall marketplace.

Thinking smart has been the cornerstone of Innovative Brick for years, and *embedding* split-face materials embraces this concept with engineering excellence and industry expertise. Tilt Wall and Precast Wall construction methods produce high performance architectural panels with simplicity in form and superiority in function. The casting process eliminates masonry labor and clutter by simply embedding the thin split face block into structural or architectural panels of any size.

As the market for embedded concrete façades evolves into ever changing possibilities, Innovative Brick Systems is leading the way. The new patented VersaLiner® system for casting *thin-block* allows owners, designers and contractors the ability to raise the bar on today's built environment. Meeting sustainable standards, rapid enclosure times, ease of installation, and having a completely durable, monolithic structure are all accomplished with VersaLiner® systems.

THERE ARE NO BETTER OR SMARTER MEANS TO CONSTRUCT LASTING, DURABLE STRUCTURES. From the 1st generation of VersaLiner® to this latest innovation, owners and designers have come to expect the best, most efficient embedded formliners in the industry.

**DESIGN SMART,
BUILD SMART,
LIVE SMART.**

Insulated panels? No problem. Unique Color requests? No problem. LEED goals? No problem. Custom joint sizes? No problem. Owners are turning toward innovative and smart approaches to facility construction.

Unlimited design and accent potential. Vary colors, mix with thin-brick, accent bands, etc.

Various piece parts to enhance transitions and overall appearance.

EMBEDDED SPLIT FACE THIN BLOCK

... ❖ WHY EMBED SPLIT FACE THIN BLOCK?

8" x 16" blocks placed in VersaLiner.

Exclusive Features of Latest VersaLiner® System

- Two-part system ensuring efficient installation and production compatibility
- Self compressing support pods™ for level, consistent depth in casting
- Deep mortar joints to replicate hand-laid CMU block construction
- Precision engineered system allows tight nesting for reduced leakage

Unique Benefits of Embedding Thin-Block

- Simple, efficient process
- Reduced embodied energy compared to full size CMU blocks (Green Building)
- Site disturbance reduced from lack of mason labor force on site
- Reduced potential for moisture penetration (mold and mildew prevention)
- Thermal characteristics and enhanced "R" values when combined with insulated panels
- Exceptional durability, extending building life
- Lower total cost of ownership (TCO) with façade maintenance eliminated
- No tuck pointing, no sealing, no painting or staining, just cast them in, erect the panel, strip the liners, pressure wash the residue and you're done!

Thin Block adds sustainable features.

Applications

- Schools + Universities
- Military Housing
- Retail + Mall Developments
- Parking Decks
- Security + Confinement
- Office + Medical
- Faith + Religious Buildings

Tilt up or Precast construction

8" x 16" corners.

Design Ideas for Embedded Split Face Thin Block

- Use as wainscoting with transition to Thin-Brick
- Complete Building façade with intricate color changes
- Elevated design bands
- Alternating bond configurations for enhanced appearances

Unlimited design potential.
